Training Outline

The primary purpose of The WRAP:

1. Stop the conflict quickly and on first contact
 2. Place subject in an upright/seated position of recovery fast
 3. Assess individual, de-escalate and provide care as needed
-

Step 1: Stop the conflict quickly and on first contact.

*****First: Start with a properly packed WRAP**

1. Get it there FAST
 2. Get it on FAST
 3. Apply it firmly
-

Step 2: Quickly position the subject in an upright/seated position of recovery.

As soon as the leg restraint is on, apply the harness to the upper body and position the subject in an upright/seated position of recovery.

Step 3: Assess, adjust, de-escalate and give care quick

Ask three questions:

1. Are they leaning back?
2. Is there a gap between the chest and the harness?
3. Are they breathing?

Make any adjustments for comfort, fit and provide timely medical care as needed.
